

Real-Time Prescription Benefits Information at the Point of Care

Get more affordable, covered medications to your patients faster. When you write a prescription using your electronic health record (EHR) system, for each individual patient you can instantly:

Know if the drug is covered and the patient's out-of-pocket cost (if applicable)

See up to five clinically appropriate brand or generic covered options

Know if a therapy requires prior authorization (PA) or has other restrictions

Find out if your EHR is enabled for real-time prescription benefits.

See other side for details.

The following systems are providing real-time prescription benefits. There's no charge for the service.

New accounts are added regularly and this list might not represent all active accounts at a given time.

Don't see your EHR vendor listed?

Contact your EHR vendor or your EHR system administrator to ensure real-time prescription benefits information will be included in your next upgrade. For Epic users, contact your Epic account manager to confirm your 2019 upgrade go-live date and determine whether additional interfaces are needed.

Having trouble accessing real-time benefits information in your EHR?

Contact your EHR vendor or your EHR system administrator.
