Our records show that you have not received your cholesterol screening. As a patient with heart disease, it's important to monitor and control your cholesterol level to lower your risk of a heart attack.

### Know Your Number

Bad cholesterol, also known as LDL, clings to blood vessel walls and forms plaque. When it comes to your LDL, lower numbers are the best numbers—and the more risk factors you have, the lower your LDL goal needs to be. After your screening, our office will be in touch with you to discuss your number and any next steps you may need to take control of your cholesterol.

To make your appointment, please call our office at \_\_\_\_\_ . Or, you may visit one of the facilities listed below to have your cholesterol checked.

Additional Facilities to Receive Your Screening	

Sincerely,
